

Index

Italicized page numbers indicate photographs.

Figures and tables are indicated with “f” and “t” respectively, following the page number.

- A2 ring taping method, 286, 286
- A2 tendon pulley injuries, 283–85, 283f
- abdominal crunch, 148, 148
- abdominal stretch, 131–32, 132
- accomplished climbers
 - injury risk reduction, 300
 - workout, 228t, 231, 231f, 232t, 233–35, 234t
- Action Directe, 11, 11, 164
- active rest, 269
- adaptations
 - to local endurance training, 93–94, 94t
 - specific adaptation to imposed demands (SAID), 16–17, 16f, 226–27
 - to strength training, 92–93, 93f, 94t
- adductor stretch, 129, 129
- adenosine triphosphate (ATP), 95, 95f, 264, 266
- advanced climbers
 - modeling, 66
 - workout, 228t, 235, 235f, 236t, 237–38
- aerobic capacity, 110, 110f, 111t, 236t
- aerobic power, 110, 110f, 111t
- aerobic system, 95f, 96–97, 96f
- aerobic training
 - about, 161
 - body composition and, 160
 - for boulderers and sport climbers, 161–62
 - climbing-specific, 114–15, 114f
 - high-volume generalized, 163
 - for multipitch and big-wall climbers, 162–63
 - nonspecific, 115
 - steady state, 162
- agonist muscles, 90
- aided pull-ups, 203
- all-day climbing, 163
- alpine climbers, 249, 253
- Ament, Pat, 3, 4, 5
- anaerobic alactic energy pathway, 95, 95f
- anaerobic capacity, 110, 110f, 111t, 112
- anaerobic lactic system, 95–96, 95f
- anaerobic power, 110, 110f, 111t
- angiogenesis, 94
- annular pulley reconstruction, 285
- ANSWER Sequence, 43–44
- antagonist muscles, 90
- antagonist muscle training, 132–33, 143–45, 244–46, 301
- anterior core muscles, 148–52
- anterior shoulder, chest, and biceps stretch, 127, 127
- anthropometry, 101
- ARC traverses, 193–94
- Armaid, 119, 122
- arm circles, 124
- arthritis, 289, 291
- arthroscopic surgery, 297–98
- associated visualization, 46–47
- associative stage, 60–61
- ATP (adenosine triphosphate), 95, 95f, 264, 266
- autonomous stage, 61
- autoregulation, 303
- Baboon Platoon, *viii*
- Bachar, John, 5, 208
- Bachar Ladder, 208
- back bridge, 153, 153
- barbell deadlift, 156–58, 157, 157t
- barbell squat, 158, 158–59
- beginner climbers
 - injury risk reduction, 300
 - workout, 228t, 229–31, 229f, 230t
- bench press, 144, 144–45
- beta, 64
- Big Bad Wolf, 30
- big-move boulder problems, 208
- bioenergetics, 101–2
- biogenesis, mitochondria, 94
- biological value (BV), 254–55, 255t
- blocked practice, 66–67, 84
- Bloc Out gym, 12
- blood sugar, 250–51, 256–57, 265

- Bobcat Logic, 278
- body composition, 159–61
- body fat percentage, 159–60
- body weight, 251–52
- Bohica, *vi*
- books, 6, 279–80. *See also*

About the Author

HÖRST COLLECTION

Eric J. Hörst (pronounced “Hurst”) is an internationally renowned author, researcher, climbing coach, and accomplished climber of forty years.

A student and teacher of climbing performance, Eric has coached hundreds of climbers, and his training books and concepts have spread to climbers in more than fifty countries. He is widely recognized for his innovative training techniques and equipment, and he has been a training products design consultant and Training Center editor for Nicros, Inc. since 1994. Eric is author of eight books (with many foreign translations) with worldwide sales of over 300,000 copies. In addition to his best-selling *Training for Climbing*, now in its third edition, Eric’s other popular texts include *Maximum Climbing*, *The Rock Climber’s Exercise Guide*, *How to Climb 5.12*, and the gym climbing book *Learning to Climb Indoors*.

Eric has written more than one hundred magazine articles and appeared on numerous TV broadcasts, and his techniques and photos have appeared in many publications including *Rock & Ice*, *Climbing*, *Outside*, *DeadPoint*, *Men’s Health*, *Fortune*, *Men’s Journal*, *Muscle Media*, *Muscle & Fitness*, *Paddler*, *Urban Climber*, *Parents*, *Wall Street Journal*, *Experience Life*, *Outdoor 4X*, and *National Geographic Adventure*, as well as European magazines such as *Desnivel*, *Alpen*, *Climax*, and *Climber*. He has co-authored one research paper (“Behavior Analysis and Sport Climbing,” *Journal of Behavioral Health and Medicine*, 2010, with Dr. Richard Fleming). Eric is a member of the International Rock Climbing Research Association (IRCRA) and the National Strength and Conditioning Association (NSCA).

A self-professed “climber for life,” Eric remains active at the cliffs, traveling widely with his wife, Lisa, and sons, Cameron and Jonathan (both of whom climbed 5.14a/8b+ at age eleven). Driven by his passion for adventure and challenge, he has established over 400 first ascents, primarily on his home cliffs in the eastern United States. Still pushing his personal climbing limits at age fifty-two, Eric’s focus is now on R & D of new training techniques, traveling and sharing his knowledge with new climbers, and coaching the next generation of elite climbers.

Other Books by Eric J. Hörst

Maximum Climbing (FalconGuides, 2010) presents a climber's guide to the software of the brain, based on the premise that you climb with your mind—your hands and feet are simply extensions of your thoughts and will. Becoming a master climber, then, requires that you first become a master of your mind. In this breakthrough book, Eric Hörst brings unprecedented clarity to the many cognitive and neurophysical aspects of climbing and dovetails this information into a complete mental-training program.

How to Climb 5.12 (FalconGuides, 2011) is a performance guidebook to attaining the most rapid gains in climbing ability possible, and it's written specifically for intermediate climbers looking to break through to the higher grades. It provides streamlined instruction on vital topics such as accelerating learning of skills, training your mind and body, and becoming an effective on-sight and redpoint climber.

Learning to Climb Indoors (FalconGuides, 2012) is the most complete book available on indoor climbing. Topics covered include beginning and advanced climbing techniques, tactics, strategy, basic gear, safety techniques, self-assessment, and a primer on mental training and physical conditioning. This guide includes everything you need to know from day one as a climber through your first year or two in the sport.

PROTECTING CLIMBING ACCESS SINCE 1991

Increase your strength, power, skill,
and focus to maximize your climbing performance.

Praise for *Training for Climbing*

"*Training for Climbing* is a great resource. Whether you're just starting out or already ticking 5.13, you'll find valuable information here to help you climb harder. This is the most complete and up-to-date training guide available."

—*Rock and Ice* magazine

Drawing on the latest climbing research, this third edition of the international best-selling *Training for Climbing* presents a comprehensive, evidence-based program for improving climbing performance. With the unique perspective of a veteran climber, researcher, and coach, Eric Hörst blends leading-edge sport science with his decades of climbing and coaching experience to create a content-rich text packed with practical how-to and what-to-do information.

A few of the new topics explored include:

- Energy system training to develop greater strength, power-endurance, and aerobic endurance.
- Recalibrating the brain's central governor for higher power output and stamina.
- Daily Undulating Periodization as an effective method of on-season programming.
- "Training zones" for rock climbers—the secret to truly effective training!
- Stabilizer training to improve arm power and reduce risk of shoulder injury.

Also included are expanded chapters on developing strength, power, and endurance in the crucial finger flexor and pulling muscles, as well as a must-read chapter on developing exceptional core strength. Hörst completes his coaching with dedicated chapters on technique and mental training, performance nutrition, accelerating recovery, and injury prevention. The book's 300-plus pages of expert instruction make for the most advanced and complete book of its type!

Eric Hörst is an internationally renowned author and a climber of forty years. As a researcher and coach, Hörst has written hundreds of articles and coached thousands of climbers from around the world. He owns the popular website Training4Climbing.com.
