

AUTHOR BIOS AND ACKNOWLEDGMENTS

Jason Koop

JASON KOOP walks the walk—or runs the run, as the case may be—when it comes to ultras. His journey from a cross-country runner at Texas A&M to ultra coach started with a postgraduation internship at CTS in the summer of 2001. A runner in a company of predominantly cycling coaches, Koop was quickly drafted and trained to be the company’s lead running coach. Over his career he has coached hundreds of athletes of all abilities for ultramarathons across the globe. In 2006 he traveled around the United States coaching and supporting Dean Karnazes as the “Ultramarathon Man” ran 50 marathons in 50 states in 50 days. Karnazes again tapped Koop’s expertise in 2011 for “Regis and Kelly’s Run Across America with Dean Karnazes,” a nearly 3,000-mile cross-country run. Then in 2021 Koop accompanied Timothy Olson for his Fastest Known Time of the Pacific Crest Trail.

Over his coaching career, Koop has served many roles including Director of Regional Coaches, Director of Coaching, Director of Operations and now serves as the head coach for CTS-Ultrarunning, where he has helped to build a department of over 15 professional ultramarathon coaches. During his tenure, he has also developed CTS’s quality assurance system for coaching, the CTS Coaching College, hiring, screening and training processes for new coaches and mentored hundreds of new endurance coaches.

Koop’s personal ultrarunning resume includes two top-10 finishes at the Leadville Trail 100 Run and finishes at some of ultrarunning’s most formidable events, including the Western States Endurance Run, the Badwater 135, the Wasatch 100, Tor de Geants and the Hardrock 100.

Acknowledgments

I am a very modest person from a humble background. I did not have a fancy education, was never at the top of my class, was not a very good athlete and if I am being honest, there’s no reason I should be the one informing thousands on anything, let alone running and training. What I did have in life are fantastic coaches, teammates, educators, and mentors, all of whom have a tremendous impact on me personally and professionally. I would be remiss if I failed to mention them and how they have impacted my career.

The coaches I have had in my life, Lyndall Weaver, Tom Clark, Chuck Estill, Billy Cox, Terry Jessup, and Dave Hartman: There’s a piece of each of you in this book.

Chris Carmichael, Jim Lehman and Jay T. Kearney: You took a kid who couldn’t coach his way out of a wet paper bag and helped him become a pretty OK coach (jury is still out though). I am forever grateful for the initial risk you took in hiring me and the countless hours you each spent helping me develop as a coach and a man.

My coauthors, Jim Rutberg and Corrine Malcolm, thank you for believing in this project, giving me a nudge when I needed it and your immense contributions to the text.

To Stephanie Howe, PhD and Nick Tiller, PhD, thank you for your blunt, honest and direct feedback on the scientific portions of this book. Your contributions raised the level of the content beyond my wildest expectations.

To Rodger Kram, PhD, thank you for your guidance in the early development in the first edition of this book. More important, thanks for helping with the bloopers.

To Martin Hoffman, MD, thank you for your guidance in the early development in the first edition of this book. More important, thank you for being a leader in the ultraendurance community.

To the coaches at CTS: Many, if not all, the ideas represented in this book are ones we as a team have developed over the course of many years, debates, and continuing education sessions. I am proud to call you my colleagues and my friends.

To Jackson Brill for your endless reference wrangling and contributions to the biomechanics section. The future is bright for you!

Special thanks to Allison Goldstein for editing and proofing the copy of this book in what is always the most humbling experience of my year.

To Abby Hall for styling and illustrations, you made this book look good!

To my mother Linda, who gave me a role model on being a humble, servant based leader.

To my father Myron, for letting me make mistakes, yet never the same one twice.

To my brother who always lent me some of his boundless entrepreneurial spirit throughout my career.

Finally to my wife Liz, who is the best partner I could ever ask for.

AUTHOR BIOS AND ACKNOWLEDGMENTS

Jim Rutberg

JIM RUTBERG'S career has centered on helping coaches and sports scientists share their expertise and guidance with athletes. In addition to co-authoring *Training Essentials for Ultrarunning*, he co-authored *Ride Inside* with Joe Friel and seven books with Chris Carmichael: *The Time-Crunched Cyclist*, *The Time-Crunched Triathlete*, *The Ultimate Ride*, *Chris Carmichael's Food for Fitness*, *Chris Carmichael's Fitness Cookbook*, *The Carmichael Training Systems Cyclist's Training Diary*, and *5 Essentials for a Winning Life*. As the Media Director and a coach for CTS, Jim has written and contributed to innumerable web and magazine articles, and his work has appeared in *Bicycling*, *Outside*, *Road Bike Action*, *Men's Health*, *Men's Journal*, *Velonews*, *Inside Triathlon*, and more. A graduate of Wake Forest University and former elite-level cyclist, Rutberg lives in Colorado Springs.

Acknowledgments

As Jason is quick to acknowledge, this is largely my fault. Jason and I have been colleagues and friends since we were fresh out of college, and I have watched him develop into one of the most respected and knowledgeable coaches in ultrarunning. When I cajoled Jason into writing the first edition of this book, I knew he had the knowledge and passion to create ultrarunning's benchmark training book, but I underestimated the enthusiastic response from the ultrarunning community. This expansive second edition aims to address at least some of the queries and requests we received from readers, a feat that was only possible with the help of a great team. In addition to Jason Koop and Corrine Malcolm, I'd like to thank Stephanie Howe, Nick Tiller, Abby Hall, Allison Goldstein, Jackson Brill, and Tuviel Levi for contributing their time, expertise, and hard work on this project. I am extraordinarily proud to play a role in bringing this work to a larger audience.

I have had the pleasure and honor to co-author several books on training and sports nutrition, and I am thankful to Chris Carmichael, the entire coaching staff at CTS, and to Joe Friel for providing their knowledge and the opportunity to devote time, energy, and resources to writing books. And thank you to my sons, Oliver and Elliot, for putting up with me and eating frozen pizza when I have deadlines.

AUTHOR BIOS AND ACKNOWLEDGMENTS

Corrine Malcolm

CORRINE MALCOLM is an endurance coach for CTS, a science communicator, and a professional ultra-endurance athlete because her sense of direction is bad enough that she often runs far too long. Corrine became a coach because she fell in love with human physiology as a cross country skier, but had an evident disdain for basement lab work as a graduate student. A self-proclaimed ‘ultra-nerd’, she thrives in being a science hub for the CTS coaching team, breaking down new research in ways anyone can understand because, in her words, “Science should be for everyone.” When Corrine isn’t writing or reading, you’ll find her chasing her husband, Stephen, or their dog, Petey, through the hills around their home. Corrine’s personal ultra resume includes top ten finishes at the Leadville Trail 100, the Western States Endurance Run, and UTMB’s TDS; and is the women’s FKT record holder on the 171-mile Tahoe Rim Trail.

Acknowledgments

As a coach, writer, and runner I’d like to think I’m permanently somewhere between green and seasoned, and because of that I will always have mentors to thank. I’m forever grateful for my coauthors, Jason Koop and Jim Rutberg; getting tagged in on this project is a dream come true. To the coaches I’ve had, you each had a hand in shaping me into the human I am today, on and off the trails. I owe you so very much. To my CTS coaching team, there is a reason I came on with CTS as a graduate student. I wanted a place to grow, and you keep delivering on that initial promise. To my parents who have watched me write many incomplete run-on sentences over the years and still encouraged me to keep writing, thank you. Finally, to my husband Stephen, may you never stop humoring me as I insist on reading out loud to you.
