INDEX

A

AC-CR stretching, 125–126
 Achilles-calcaneus-plantar system, 538
 Achilles rupture, in women, 33
 Achilles tendon, 12, 41, 47–49, 54, 65,
 103–104, 143, 145, 151, 378
 collagen matrix, 34
 CSA, 33
 tendon strain and, 57
 Acidic metabolites, 24
 Acoustic radiation force impulse (ARFI),
 229–230
 Actin, 19
 Acute compartment syndrome, 197
 Acute inflammation, 203
 Acute muscle disorders and injuries, 192
 Adaptation, 245–246
 Adaptational response
 in female runners, 34
 of intramuscular fasciae, 7–8, 12
 Adenosine-triphosphate (ATP), 22
 Advanced glycation end-products (AGE), 63
 Aerobic and resistance exercise, 200
 Aerobic exercise, 199, 201
 Ageing, effects of, crimp and springiness,
 9–10
 Age of myofascial chains, 142
 Algometry, 236–237
 Amenorrhea, 34
 Amortization phase, 282
 Anabolic metabolism, 336
Anatomy Trains, 471
 Ankle instability, 376
 Ankylosing spondylitis, 215
 Antagonist contraction (AC) stretching,
 124–125
 Anterior cruciate ligament (ACL), 65
 injury, 31, 33
 testosterone and stiffness of, 40
 Anti-oxidative protection program, 336
 Aponeurosis, 12
 Arm lines, 416f
 ARTT Exercise, 256–257

Assessment methods
 algometry, 236–237
 application and benefits, 242
 electrical bioimpedance, 238–239
 indentometry, 238
 myometry, 237–238
 palpation, 235
 questionnaires/scales, 235–236
 ultrasound, 239–240
 ultrasound-elastography, 241–242
 Asymptomatic hypermobility, 85
 Athletic muscle injuries, 191
 classification of, 191–192
 diagnosis of, 197
 direct and indirect, 192, 192t
 muscles involved in, 191, 195f
 partial muscle tears, 195
 subtotal muscle tears and tendinous
 avulsions, 195–196
 Autogenic inhibition, 125
 Autonomic nervous system (ANS), 19

B

Back injuries, 193
 Balanced muscle development, 455
 Barefoot running, role of proprioceptive
 stimulation involvement, 10
 Basement membranes, 202
 Beighton tests, 83, 84f
 Benign joint hypermobility syndrome, 215
 Biochemical stimulation, of fascial
 tissues, 7
 Bio-positive stimulation, 371
 Biopsy probes, 216
 Biotensegrity, 129–131, 134–135, 138f,
 353, 412
 based training principles, 137
 models, 137f
 in sport and movement, 136–139
 Bisphosphonates, 89
 Blumenbach, Johann Friedrich, 132
 B-Mode images, 225
 Body-Mindfulness, 401–402

Bone brittleness, 133
 Bone rhythms, 496
 Bonghan channels, 108
 Bounced landing technique, 407f
 Box pattern, 582f
 Brachial fascia, 141
 Breast cancer, 553
 movement therapy benefits, 555
 movement therapy for, 553–554
 movement therapy program design,
 555–556
 phases of recovery, 558–559
 post-rehab phase I, 559–560
 post-rehab phase II, 562–563
 Breathing, 455
 Bristol impact of hypermobility test, 83
 Busquet, Léopold, 142

C

Cannabinoid receptors (CBRs), 26
 Cardiovascular endurance training, 9
 Cartilage protein turnover, 65
 Catapult effect, 97
 "Catapult effect," 499
 Cerebral hormones, 18
 Cerebral palsy (CP), 164
 C-fibers, 19
 Chiari malformations, 87
 Chin-to-chest test, 220f
 Chondroitin sulfate, 329
 Chronic inflammation, 203
Classic Book of Internal Medicine, 301
 Cleland, John, 135
 Closed-chain kinematics, 136
 Co-contraction, 134
 Collagen fiber network, 4, 7
 elasticity of, 99
 Collagen fibrillogenesis, 67
 Collagenous fibrous connective tissues,
 4, 5f
 response to loading, 10f
 role in sports, 8
 Collagen propeptide, 47

Collagen tissue, degradation of, 47
 Collagen turnover, after exercise loading, 13, 13f
 Complex Regional Pain Syndrome (Sudeck's disease), 19
 Compression, 65, 66f, 133
 Compressive loading, 67f
 cellular and molecular response to, 66–68
 nutrition for connective tissues and, 71–72
 Compressive strength, 64
 Connective tissues, 4, 63, 66
 nutrition for, 68–71
 Contract relax (CR) stretching, 125
 Contusion injuries, 196–197
 Creatine phosphate (CP), 23
 Crimp, 10, 12
 pattern, 100
 Cross-correlation analysis, 225–226
 Crossed syndromes, 247, 248f
 Crossover test, 220f
 Cyclical movement, 345

D

Dance, 503
 as fascial training, 505
 training, 504
 Dancing workout, 500
 Davis' law, 10, 11f
 Deep adipose tissue (DAT), 175
 Deep front line, 418f
 Delayed onset muscle soreness (DOMS), 121, 185–186, 193
 Delayed onset muscle soreness (type 1B), 192–193
 Denosumab, 89
 Denys-Struyf, Godelieve, 142
 Descartes, René, 131–132
 Distal net focus, 321, 322f
 Distal semitendinosus, 194
 Dopamine antagonists, 18–19
 Duchenne myopathy, 20

Dynamics-based signaling system, 267
 Dysfunctional lymph flow
 dynamics, 108, 108f

E

Eccentric calf muscle training, 299f
 Eccentric training
 forms of, 292
 Ehlers–Danlos syndrome, 86–88, 215
 clinical classification of, 87t
 hypermobile, 86
 Elastic breath cycle, 431f
 Elastic capabilities
 of human species, 98
 kangaroo hopping vs frog jumping, 101–102
 in muscle training, 99f
 of primate family, 97–100
 Elasticity, 427
 Elastic recoil properties
 of fascial tissues, 97
 improvement via training, 100–101
 kangaroo hopping vs frog jumping, 102
 Elastic springiness
 of collagenous tissues, 97
 stretch loading and, 100
 Elastic storage quality, 9
 Elastic walking, 346
 Elastin
 elasticity of, 99
 fibers, 112–113, 113f
 Electrical bioimpedance, 238–239
 Electromyographic (EMG) signal, 305
 Encephalomyelitis disseminata, 20
 Endocannabinoid receptors, 202
 Endogenous cortisol, 26
 Endogenous detoxification, 336
 Epimysial fascia, 379
 Ergoreception, 172
 Estrogen, 26, 31, 35, 40
 influence on tendons and ligaments, 36–39
 modes of interaction between T/L tissue and, 30f

 in postmenopausal women, 31
 in premenopausal women, 31
 Exercise
 protective effects of, 206f
 psychological benefits of, 208
 Exercise and immune function, 202–203
 Exercise for cancer survivors, 207–208
 Exercise loading, collagen synthesis after, 13, 13f
 Exercise oncology, 205–207
 Exercise prescription, 200–202
 Exercise protocol, 358
 Extensor digitorum longus (EDL), 157
 Extensor hallucis longus (EHL), 158
 Exteroception, 170
 Extracellular matrix (ECM), 24, 26–27, 63, 65–66
 Extrapyramidal movement coordination, 18–19

F

Fascia/fasciae
 connections with other muscles, 5–6
 effect of stretching, 120
 elastic recoil of, 97
 in force transmission, 4, 135
 form and function of, 3–5
 functional definition of, 4
 histological/anatomical definition of, 4
 importance of hydration, 107–108
 nomenclature recommendations of, 5f
 oriented treatments, 107
 pain and, 175–176
 recoil, 100
 regeneration of, 26–28
 related studies, 3
 as a sensory organ, 169
 sensory receptors in, 174–175
 septal tissue, 135
 Fascia-focused Pilates movement, 452t
 Fascia-focused training, 485
 Fascia functions, factors affecting
 extracellular matrix (ECM), 24
 growth factors, 25

INDEX

hormones, 26
 lactate, 24
 physical strain, 21–22
 temperature, 22–23, 23f
 tissue pH, 23–24
 Fascia lata, 3
 Fascial fibroblasts, 7
 Fascial fitness exercise, 269, 272
 Fascial matrix stiffness, 203
 Fascial net, 170
 Fascial preload, 8
 Fascial stretching, 315
 fascial stretch technique, 320–322
 fascial system, 315–316
 function-based stretching, 316
 stretch spectrum, 316
 stretch technique, 320–321
 Fascial tissues, 21
 adaptability to mechanical loading,
 7–8, 12
 biochemical stimulation of, 7
 changes, 12–13
 components of, 6–7, 7f
 in daily practice, 13
 in sports science, 8–9
 Fascial training principles, 547f
 Fascia-muscle interaction, 269–270
 modes of, 269–270, 270f
 Fascia-related dysfunction
 adaptation, 245
 assessment objectives, 246
 gathering evidence, 246

 Superficial front line, 413f
 Supersonic shear wave imaging (SSI), 231
 Syndromic joint hypermobility, 86

T

Tactile C-fibers, 175
 Temperature balance, during physical activity, 22–23, 23f
 Tendinopathy, 55
 Tendinous avulsions, 195–196
 Tendinous collagen synthesis, 34–35
 Tendon adaptation, 56–58
 Tendon CSA, 33, 34f, 35, 40
 Tendondisorders, 296

INDEX

Tendon injury, 530
 Tendon plasticity, mechanisms of, 53–55
 Tendons
 androgen and relaxin, influence of, 40–41
 collagen content of, 34
 collagen synthesis, 34
 effect of stretching, 119–120
 estrogen, influence of, 35–40
 mechanical properties of, 55–56
 oral contraceptives, influence of, 39–40
 sex difference in, 33–35
 tissue changes, with maturation and aging, 50f
 Tendon stiffness, 33
 definition, 53
 effects of, 56
 Tendon strain
 Achilles tendon and, 57
 strain rate, 57
 Tendon training, 55–56, 58
 evidence-based recommendations, 59f
 Tensegrity, 129, 133, 136f, 492f
 features, 131
 model, 130f, 131
 Tensile loading, 67f
 Tension, 65, 66f, 133
 Teriparatide, 89

Testosterone, 40
 Thoracic outlet syndrome, 388
 Thoracolumbar fascia (TLF), 3, 175, 230, 485
 Tibialis anterior (TA), 158
 Tight hamstrings, 251
 Tissue continuity, 144
 Tissue memory, 266
 Tissue memory phenomenon, 266
 Tissue regeneration, role of lactate in, 24
 Tissue resilience, 420f
 Tissue stiffness, musculoskeletal soft, 64f
 Tonic muscle, 20
 True elasticity, 425
 Tumorigenesis and metastases, 204–205
 Tumor suppressor genes, 204
 Type I collagen, 63, 184
 Type III collagen, 34, 63, 184

U

Ultrasound, 238–239
 Ultrasound elastography, 227–228, 231, 241–242
 Ultrasound elastography methods, 228
 Upper-crossed syndrome", 219

V

Vector variability, 581
 Ventricular myocardial band, 133
 Vicinal water, 112
 Viking Test, 217
 VISA-P questionnaire, 124
 Viscoelasticity, 428
 Visual Analogue Scale (VAS), 236
 Vitamin C, 69–70, 401
 collagen synthesis, role in, 70–71
 connective tissue function, role in, 66
 Vitamin C-enriched gelatin, 72, 185

W

Wearable resistance, 287–288
 Wolff's law, 10

Y

Yawning stretch, 432f
 Yin yoga sutras, 437
 Yoga, 77–80, 82, 85–86, 117, 177, 419f
 Young's moduli, 231
 Youthful collagen architecture, 9–10
