

# 17 Stretching Exercise Illustration

This chapter provides photographs with explanations of a variety of stretching exercises that can be employed within a standard athletic warm-up or within a dedicated flexibility training sessions. A standardized warm-up is presented below which outlines in general the allocation of flexibility, mobility and activation activities.

Table 17.1 Standardized Warm-up Components Example

| <i>Submaximal<br/>Aerobic<br/>Warm-up</i>                                                                                                                                  | <i>Static Stretching</i>                                                                                                                                              | <i>Mobility and Activation</i>                                                                                                                                                                                                                                                                                                        | <i>Dynamic<br/>Stretching and<br/>Sport Specific<br/>Movements</i>                                                          |
|----------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------------------------------------------------|---------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------------|-----------------------------------------------------------------------------------------------------------------------------|
| Examples: Running, jogging, bike (arms and legs), cycle ergometer, skipping. Elliptical, attempt to increase core temperature by 1–2°C as evidenced by a sweating response | 1–2 repetitions of 15–30 seconds per muscle group (≤60 seconds per muscle group)<br>3–5 stretches<br>Target restricted groups or relevant groups for training session | Choose two or three exercises to address weaknesses and 2–3 exercises for specific movement patterns<br>5–8 repetitions per exercise<br>Address common weaknesses or deficiencies (e.g. gluteal bridge, band hip flexor, banded lateral/forward walks, band pull-aparts)<br>Prepare movement patterns for workout (e.g. squat, hinge) | 5–8 exercises, Example: 10-minute sprint out and back<br>Elevate heart rate, prepare for workout, work on movement patterns |
| 5–10 minutes                                                                                                                                                               | 3–5 minutes maximum                                                                                                                                                   | 3–6 minutes maximum                                                                                                                                                                                                                                                                                                                   | 3 minutes maximum                                                                                                           |
